Configurations

1) Position yourself over the **MageRocket** icon, click, and then click on Settings.

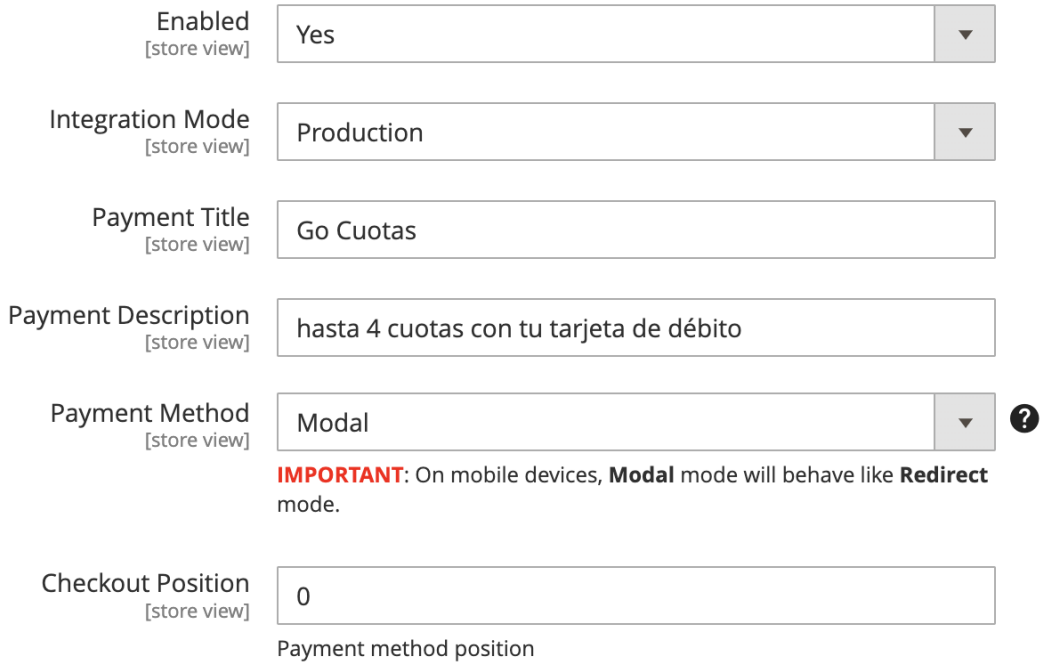

> In case the menu doesn't appear, you can access it from **Stores** > **Configuration** > **Sales** > **Payment Methods**.

2) Now we need to find the **Go Cuotas** payment method and click on **Configure**.

3) Once the button is clicked, all available configurations will be displayed.

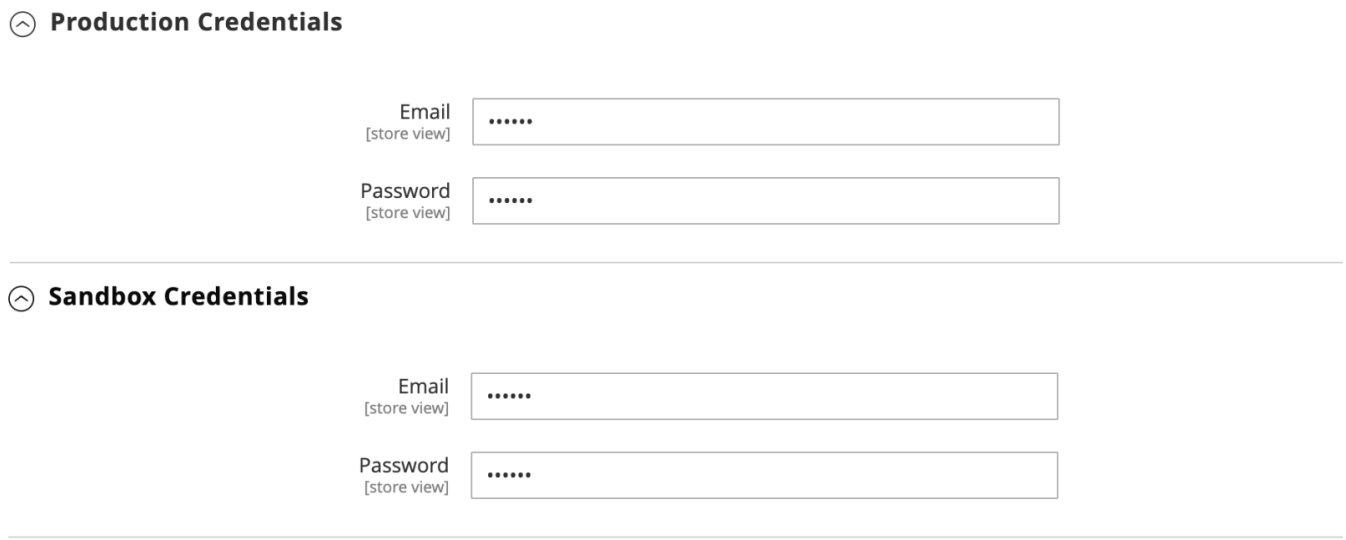

The first thing we need to do is configure the **Credentials**, **Payment Method** (Redirect or Modal) and **Environment** (Testing or Production).

- **Enable**: Determines if the payment method is available.
- **Integration Mode**: Determines if the module operates in Testing or Production mode.
- **Payment Description**: Allows you to modify the description that the customer will see at checkout.
- **Payment Method**: Modal or Redirection. Determines whether a modal will open to complete the payment or if the customer will be redirected to the Go Cuotas site to make the payment.

- **Checkout Position**: Allows defining the position of the payment method in the checkout.

Credentials Configuration

- **Production Credentials** / **Sandbox Credentials**: You must fill in the **Email** and **Password** provided by **Go Cuotas**.

> **Remember** that each environment has its own credentials.

Order Configuration

From here, you can configure the states for orders with **Approved Payment** and **Payments Rejected** or **Canceled by the User**.

- **Status for Approved Orders:** It will display all states associated with the **Status Processing.** Default Value: **Processing**.
- **Status for Rejeced Orders:** It will display all states associated with the **Status Canceled.** Default Value: **Canceled**

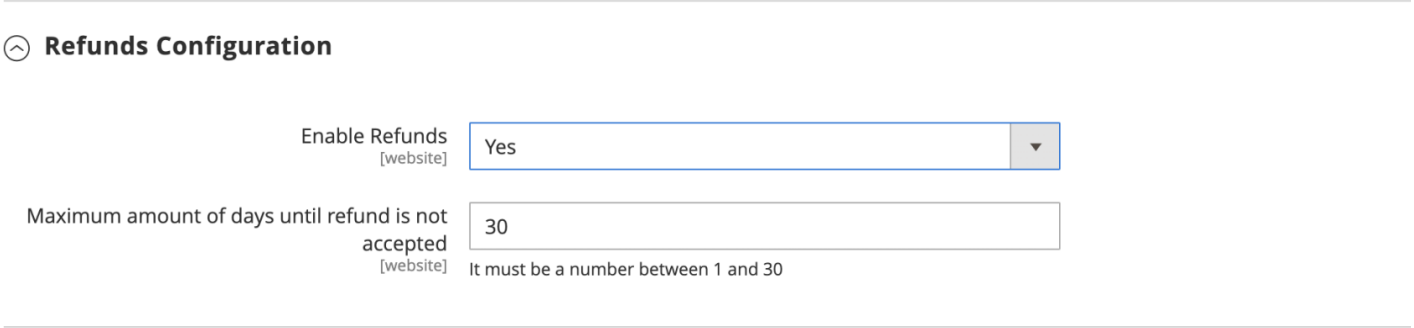

Cron Configuration (GoCuotas v1.0.4)

Starting from **version 1.0.4**, it is now possible to customize the waiting time before Magento automatically cancels an order due to non-payment.
The waiting time can be configured **starting from a minimum of 30 minutes** (default value). If you decide to increase this time, it must always be expressed in minutes.

Refunds Configuration

This section allows you to enable **Refunds** and configure the maximum number of days within which a refund can be generated.

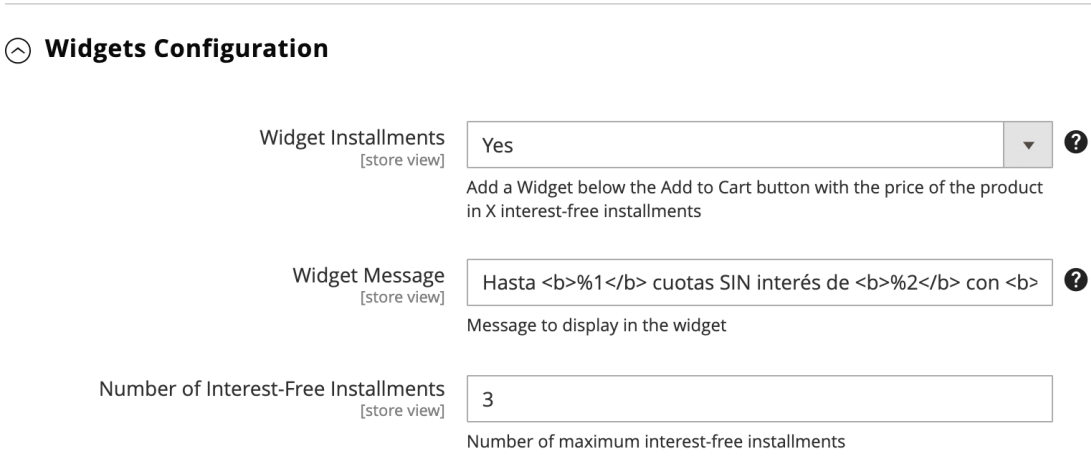

- **Enable Refunds:** Allows enabling/disabling Returns.
- **Maximum amount of days until refund is not accepted:** After the configured number of days, it will not be possible to refund the payment.

> **IT IS POSSIBLE TO MAKE A SINGLE TOTAL OR PARTIAL REFUND.**

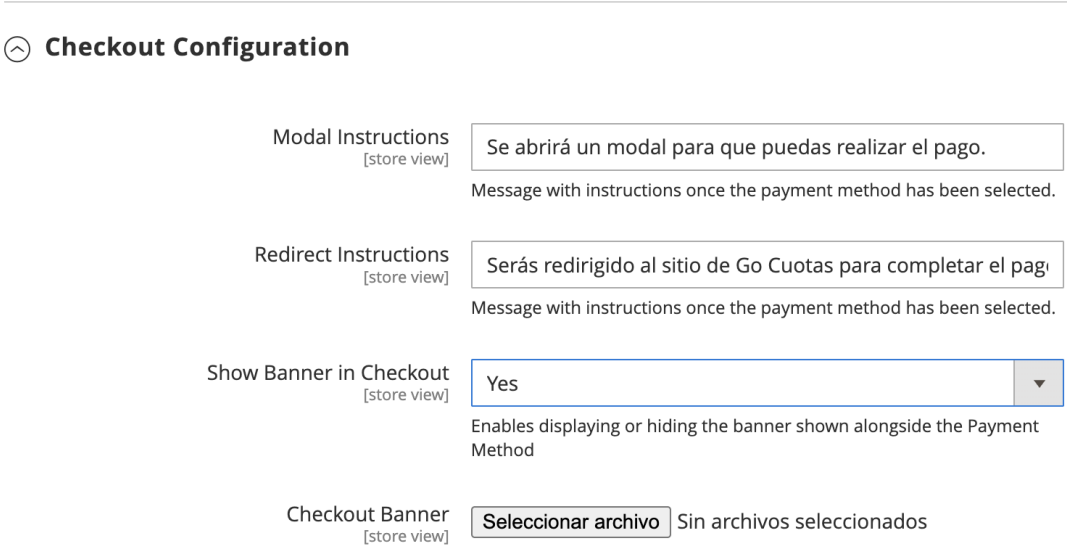

Widgets Configuration

From here, you will be able to **enable**/**disable** and customize the **Widget** displayed on the **Product Page.** If you need to modify the text of the widget and maintain the installment number and amounts, you should use **%1** and **%2** respectively wherever you want to display them.

Checkout Configuration

From here, you can modify options for the **Payment Method** at checkout.

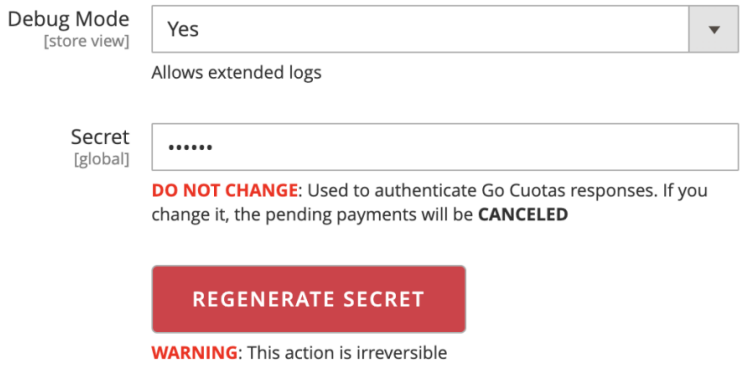

- **Show Banner in Checkout**: Show/Hide banner.
- **Customize Banner**: Allows replacing the banner with a custom one.
- **Modal Instructions**: Modify the message the customer sees when paying with the Modal method.
- **Redirect Instructions**: Message the customer sees when paying with the Redirect method.

Others Configurations

Here you will find rare configurations

Others Configurations

- **Debug Mode:** Allows you to activate/deactivate extended reports.
- **Secret:** Unique signature to authenticate **Go Cuotas** notifications.

Go Cuotas v1.0.3

- **REGENERATE SECRET:** Allows you to regenerate the Secret

> **Under no circumstances should the Secret be modified. Doing so will result in the cancellation of pending orders.**
